BURROWS AND OPEN AREAS USE

Ken Black
Lodi's Gems Harmonix Rodent Paste

Dave Reece introduces Lodi's Gems Harmonix® Rodent Paste with Ken Black in our on-farm video guide series looking at best practices in rodent control for specific farm types and areas: www.lodi-uk.com/gems-harmonix

- Burrows
- Open Areas
- Livestock
- Poultry
- Pig
- Arable/crop

CONSIDER SUSTAINABILITY & SECONDARY POISONING

Non-persistent in the environment
& non-bioaccumulate

10,000 mice baited with Harmonix Rodent Paste must be eaten by a dog to reach a lethal dose

*LD50 figure based on residue found in mice.

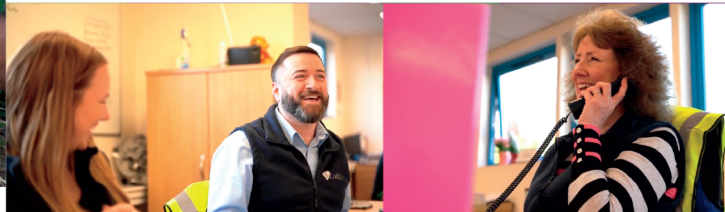

Lodi's Gems Harmonix Rodent Paste contains a naturally occurring active compound

80% less product plastic in our packaging.

LodiUK We Are Lodi UK

Every year we strive to launch new, innovative active ingredients and formulations to ensure that our customers have the best possible armoury in controlling pests.

LodiUK LODI UK LAUNCH Lodi's *Gems* HARMONIX

Revolutionising rodent control in UK farming thanks to our brand new active

Suitable for **outdoors, open areas & burrows**

* Lab trial against mice (5 males & 5 females)

Lodi's Gems Harmonix[®] Rodent Paste is the result of years of innovation leading to the development of a completely new solution, based on the active substance cholecalciferol. Available in an optimised bait matrix and in modern, sustainable packaging.

As a new edition to Lodi's Gems range, Harmonix[®] Rodent Paste is a highly effective ready-to-use non-anticoagulant rodenticide for the control of rodents. It provides farmers with an innovative and flexible solution to rodent problems which untreated can lead to disease, property damage, fire risk, and costly repairs.

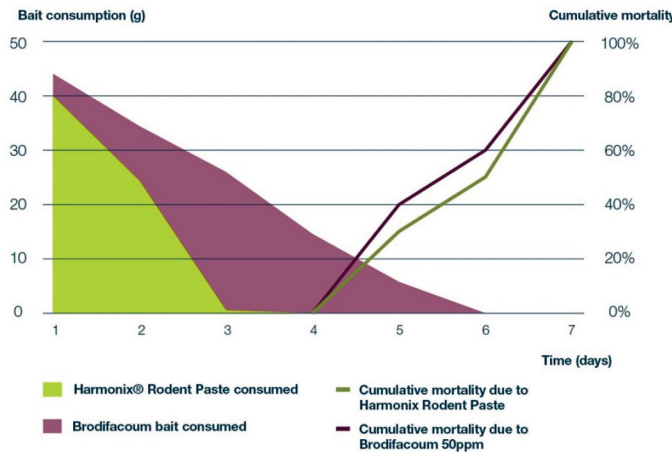

The introduction of Harmonix has no known resistance and is proven to be twice as effective as anticoagulants using half the bait and working in as little as 7 days.

Key innovations Lodi's Gems Harmonix[®] Rodent Paste

- Open areas and burrows uses listed on the label
- Proven to be twice as effective as anticoagulants working in as little as 7 days using half the bait
- Stop feed effect occurs after 2-3 days reducing rodent activity, disease and damage
- Reduced secondary impact on non-target species as the active is non-bioaccumulative and non-persistent in the environment
- No resistance build up

Effective action against rodents helps to protect crop yields and livestock from disease and cross contamination. It is also vital to maintain a safe working environment for farm staff, protect nearby residents, and ensure food safety standards are met.

THE BEST RODENTICIDE FOR USE IN OUTDOOR SETTINGS SUCH AS IN BURROWS & OPEN AREAS?

Lodi's Gems Harmonix[®] Rodent Paste is an exceptionally powerful rodenticide that controls rodents in as little as 7 days using half the bait of other products. Containing 0.077% Cholecalciferol which is fast-acting and encourages rodents to cease feeding within 3 days, reducing activity significantly. This Stop-Feed Effect also minimises the risk of contamination and damage caused by rodents on farms.

Lodi's Gems Harmonix[®] Rodent Paste is not the standard 'in and around buildings' rodenticide. It is classified as non-bioaccumulative or persistent in the environment.

Therefore, secondary poisoning to birds of prey and other non-target species is reduced.

Lodi's Gems Harmonix[®] Rodent Paste can be used indoors as well as in open areas and burrows giving you greater freedom to protect your farm.

Burrow baiting can help prevent a neophobic response from rodents as the rats and mice are less likely to search for alternative sources of food.

Close monitoring should be done when using Lodi's Gems Harmonix[®] Rodent Paste, with weekly visits being the minimum recommended.
