THE MOST EXTENSIVE RANGE OF HIGH QUALITY PEST CONTROL PRODUCTS

THE BEST UK PRODUCTS

Lodi UK offer the most comprehensive range of insect and rodent control products. We are the only company in the UK that can offer a complete range of fly products. With the launches of Azamethiphos and Cyromazine we ensure that we offer the full product package to control flies in the most difficult and intensive environments.

INVESTING IN THE BEST UK FORMULATIONS

Large investments have and are being made to ensure that Lodi UK can offer the most unique and highest performing products. Lodi UK boasts the UK's fastest working insecticides and rodenticides and our range of products ensures that we can control any infestation fast and effectively.

SUPPORTING WITH THE BEST SERVICE

Lodi UK have partnered with one of the most experienced technical advisors proven to resolve rodent infestations in the most testing of environments and supported organisations under pressure to resolve their fly issues.

PROVEN TO PROTECT AGAINST THE LAW

Under the Clean Neighbourhoods and Environment Act, farmers and waste sites must keep fly and rodent infestations under control otherwise they could be fined up to £50,000 or face a custodial sentence. Recently there have been some high-profile cases around the country whereby authorities have successfully taken farmers and waste sites to court for

having fly infestations. We can successfully support the British farmer and waste sites with the Lodi UK product and service package to control infestations and ease the pressure from local authorities.

RODENT CONTROL CERTIFICATE THROUGH LODI UK

The European rodenticide regulations which came into effect on 1 March 2018 are designed to ensure that such products are used correctly, in ways which minimise their exposure to wildlife and other non-target species. They limit the sale and use of professional-strength rodenticides to named individuals who hold a certificate which is approved by the Campaign for Responsible Rodenticide Use (CRRU) or who work for a farming business which is a member of a CRRU approved Farm Assured Scheme. Evidence will be required at the point of purchase.

Lodi UK provides an e-learning course in conjunction with Lantra comprising of learning modules and a proctored multiple choice exam which upon successful completion, provides a nationally recognised and CRRU approved qualification reflecting national standards for the rodent management sector. This will enable you to purchase professional rodenticide pack sizes of 3KG and above. Please select the course link below:

BRITISH LION QUALITY CODE

Several Lodi UK products hold British Lion Quality Code approval for fly and red mite control on all breeding farms, hatcheries, rearing and laying farms, feed mills. These products include Maggots, TwentyOne, Sheila, Perbio Choc, Phobi Flash and Organ-X Desi-Dust.

AMENITY PRODUCTS

Lodi UK are proud to launch the complete fly, wasp, rodent and bird control package for use on waste management and recycling sites. Look out for this symbol highlighting our amenity products throughout the catalogue and read more about our on site services from page 24.

FULL MARKETING SUPPORT

INSECT CONTROL

Fly and Red Mite

Maggots

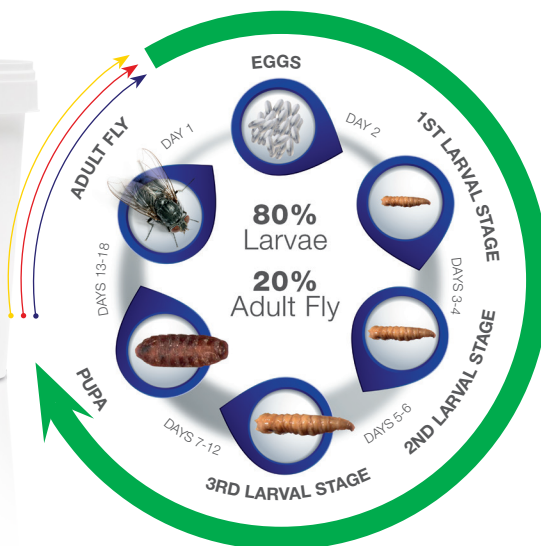

**KILLS
MAGGOTS**

Maggots is a fly larvicidal product which is specially formulated to eliminate and control nuisance fly larvae.

The product is primarily used in:

- Poultry Houses
- Dairy and Calf Units
- Pig Fattening and Pig Breeding Units
- Sheep and Goat Units
- Horse Stables
- Waste Management & MBT Sites

MAGGOTS ATTACKS 80% OF A FLIES LIFECYCLE

GRANULAR LARVICIDE - 2% Cyromazine

Maggots is a highly efficient larvicide that attacks the maggot and stops it developing into a fly. Formulated with the growth regulator cyromazine it is very easy to use and can either be sprinkled on slurry or sprayed after dilution in water. Maggots is the only effective way of stopping fly problems and the results can be seen on the adult fly population in approximately 2 weeks after first application.

Fly larvae feed in the top four inches (100mm) of muck and it is important that the product is applied in four inch (100mm) layers.

Maggots targets 80% of a fly's life cycle. This ensures that the problem is tackled at source as prevention is better than a cure. With up to 7,000 maggots in 1kg of muck fly problems can occur very quickly. Flies are responsible for a number of diseases in your livestock or poultry house including Salmonella and Brachyspira which can dramatically reduce production levels or in the worst cases shut down your farm.

Maggots will help to reduce liquefaction of manure, leading to easier removal of muck which will ultimately save time and money and produce better manure quality. The product is proven to reduce ammonia and help to reduce odour (therefore reduces ventilation costs). A decrease in fly population is proven to increase productivity in animal housing.

HSE: 9553

Application	Dose Rate	Treated Area
Dry Scattering	500g	20m ²
Spraying (Directly onto muck)	500g / 5L of water	20m ²
Spraying (Indirectly – through slatted floor units)	500g / 15L of water	20m ²

Twenty One

WETTABLE POWDER CONCENTRATE - 10% Azamethiphos

Twenty One is a uniquely formulated product for professional use against flies in livestock housing by application to walls and ceilings of cowsheds, stables, piggeries, poultry sheds, waste management sites and other environments.

- Azamethiphos is the fastest chemical on the market
- The only product available that can be both sprayed and painted
- Effective for 12 weeks
- Attracts insects fast with pheromones and attractants
- The only product on the market that can kill by contact or ingestion
- See results straight away, kills the fly almost instantly

HSE: 8851

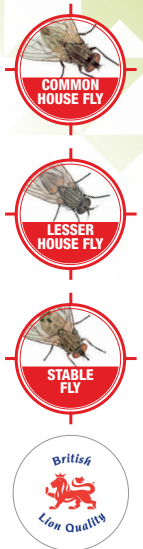

Sheila

READY TO USE GRANULAR FLY BAIT - 1% Azamethiphos

Sheila Fly Bait is a ready to use granular insecticide for the control of flies in livestock housings etc. The product is effective where flies congregate such as animal pens. It contains unique sex pheromones and attractants that lure flies to the bait killing them quickly.

- Azamethiphos is the fastest chemical on the market
- Flies will die almost instantly
- Flies love the colour of Sheila which also works as an attractant
- Flies lured to their death with pheromones and attractants
- Instant results – dead flies next to bait
- The only bait that can kill by ingestion or contact
- Lasts Longer than any other bait on the market

Digrain C40 WP

WETTABLE POWDER CONCENTRATE - 40% Cypermethrin

New and highly effective wettable powder with proven long term residual activity. For use against flying and crawling insects in and around domestic and industrial establishments, slaughter houses, refuse tips, dustbins etc. For use on furnishings, hard horizontal and vertical surfaces where flies, beetles, ants and other flying and crawling insects may rest. Available in 3 different sizes to suit your usage.

- **Highly effective wettable powder with long term residual activity**
- **Proven 100% long term mortality against insects such as flies, beetles, ants and other flying and crawling insects**
- **50% more applications vs other comparable products**

HSE: 10402

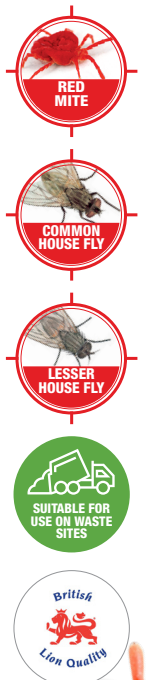

Perbio Choc RTU

READY TO USE ADULTICIDE - 0.64% permethrin, 0.63% tetramethrin

RTU covers an amazing 625sqm. Fogging covers 12,500m³. Perbio Choc is the strongest ready to use insecticide in the UK. It stops all flying and crawling insects including red mite - dead, and provides up to three months of control after a single treatment.

- UK's strongest ready to use insecticide
- Kills insects within seconds
- Kills red mite and all other flying and crawling insects
- Effective for up to three months

INSECT CONTROL

Eliminate Fly Problems

Sheila and Twenty One should be used in conjunction with each other to quickly and effectively eliminate fly problems on intensive farms. Place Sheila above the livestock, this will allow the unique fly sex pheromones and food attractants to attract flies that are irritating animals and kill them instantly. Twenty One should be placed below the floor slats. This hardy chemical can easily withstand these conditions and will attract and kill flies leaving muck.

Sheila / Twenty One Application Boards

For use when applying Sheila and Twenty One as demonstrated in the diagram above.

Product	Code	Description
Sheila / Twenty One Application Boards	S21B	Application Board

How To Use Lodi Insect Control Products

Intensive On-Farm Fly Control Programme

Recommended approach to Fly Control in Animal Housing

Sheila is ideal for use in fly monitoring. If fly problems are encountered in buildings this will provide a measurement of fly activity. If you start to notice flies on or around Sheila it is time to start taking action.

Both **Sheila** and **Twenty One** should be applied to both sides of the fly killing boards demonstrated in the diagram. This will increase the efficacy and efficiency of the fly control system and also creates less work when setting up the fly control programme.

It is beneficial to be proactive with **Twenty One**, this product should be used before the onset of flies. This will ensure fly problems are kept under control from the beginning of the season and it is easier to use before the animal housing is re-stocked.

Maggots should also be applied when you start noticing flies. There is a short window of opportunity for the Maggots to be applied in order to quickly eliminate the oncoming problem.

Perbio Choc RTU should be applied to fly resting areas. It is effective for up to 3 months after a single treatment, killing and controlling red mites and other flying and crawling insects within seconds. The UK's strongest, ready-to-use insecticide.

Digrain C40 WP is a new and highly effective wettable powder with proven long-term residual activity. Available in 3 different sizes to suit your usage. For use on furnishings, hard horizontal and vertical surfaces against insects such as flies, beetles, ants and other flying and crawling insects.

ORGAN-X FLY TRAP XL is a new stronger, sealable bag. The Fly Trap XL is a non-toxic solution to fly problems. Using fast-catch technology, each trap can catch up to 40,000 flies. Just add water and hang in farm buildings, animal housing, homes, gardens and waste & industrial sites.

Alphi

10% Azamethiphos

Alphi is a highly effective adulticide with larvicide action against Litter Beetle in Livestock and Poultry housing. Litter beetle can be very destructive and have been known to undermine the structure of some poultry units. They are also a known vector of disease. In broiler units the key issues of litter beetle appear at turnaround of chickens. As soon as the shed is emptied and food is removed in preparation for cleaning the beetles will migrate to cracks and crevices in the walls.

Once the disinfection and clean is done and chickens and feed are reintroduced the beetles will migrate back into the shed with all the disease that may have been prevalent before the deep clean. Alphi should be applied before and after the deep clean around the base of the walls to control beetles and larvae in their migration to and from the walls.

HSE: 8851

Product	Code	Description
Alphi 1kg	ALPHI	1kg Pack

Quartz Dusting Powder for Wasp nests/ants/fleas

0.50% Azamethiphos

Quartz dusting powder will control wasp nests / ant infestations and fleas, fast and effectively. A new formulation to the UK market that disables insects fast and controlling infestations within hours. It is very easy to use and should be applied where insects reside. For wasp nests simply powder the entrance to the nest - wasps will take the powder into the nest and kill the colony from within. For use in and around buildings.

HSE: 9696

Product	Code	Description
Quartz 3kg	QU01	3kg Bucket

Digrain Fly Reel, Refill & Glue Roll

FLY REEL - Easy install, non-toxic, environmentally friendly and proven.

FLY GLUE ROLL - Unique design with fly sex pheromones and specially formulated glue for non-toxic control of flies on the farm.

HSE: 9352

Digrain Control

0.25% Permethrin & 0.24% Tetramethrin

The strongest fly control aerosol on the UK market containing two actives! A giant 600 ml can to ensure that flies can be controlled quickly around your farm house and buildings.

HSE: 7493 NI: 7493

Product	Code	Description
Digrain Control	I8059	600ml Can

Digrain Wasp & Hornet Destroyer

0.25% Permethrin & 0.24% Tetramethrin

The UK's strongest Wasp aerosol with a spray length of up to 18 feet! Slowly approach the nest from a distance whilst spraying in bursts. The spray will instantly disable wasps, allowing you to spray the whole nest and resolve the problem.

HSE: 7644 NI: 7644

Product	Code	Description
Digrain Wasp & Hornet	I8057	600ml Can

Dairy Fly Spray

2.175% Pyrethrins

Concentrate makes the equivalent of 10 x 5 litre drums of ready to use fly spray.

- Suitable for fogging and misting covers up to 15,000m³.

Insecticide for professional use against flying and crawling insects. For use in and around Farm Buildings, Dairies, Milking Parlours, Animal Rearing Facilities and Animal Housing.

A highly concentrated pyrethrum formulation that will target and control insects fast. Pyrethrum is unique in that after it has controlled the infestation it will disappear, making it ideal for sensitive areas.

HSE: 8454

Product	Code	Description
Dairy Fly Spray	I4218	500ml Liquid Concentrate

PHOBI

Insect Control

Phobi CAPS

9.2% Cypermethrin, 0.46% Prallethrin

A new UK Prallethrin active adding to the Phobi range!

- Fast knockdown and residual
- Odourless and non-staining
- Active on porous and non-porous surfaces
- Microencapsulation ensures long-term stability of the active against light, temperature and humidity
- Different sized capsules within the active allows for regular and continuous release

Concentrate makes the equivalent of 20 x 5 litre drums of ready to use insecticide spray.

Phobi Caps is a micro-capsulated insecticide used against crawling & flying insects such as cockroaches, bed bugs, ants, flies and mosquitoes. Prallethrin gives the product a shock effect while the microencapsulation of Cypermethrin ensures the stability to light, temperature and humidity. Thanks to the different sizes of capsules, the release of cypermethrin is regular and continuous.

HSE: 10658 NI:10658

Code	17216
Description	500ml dosing bottle - concentrate

Phobi F&F One Shot+

0.11% Imiprothrin, 0.33% Cyphenothrin and 0.01% Natural Pyrethrum

The Phobi F&F One Shot+ fogging device is formulated with the proven combination of actives used in the Phobi range (Imiprothrin & Cyphenothrin). Faster and more effective than any other comparable product on the market.

- 100% mortality of flying insects in 3 minutes
- 100% mortality of German cockroaches in 5 minutes

HSE: 10680 NI:10680

Product	Code	Description
Phobi F&F	I4206	600ml Can

Phobi Flash Dose

2.175% Pyrethrins

Concentrate makes the equivalent of 10 x 5 litre drums of ready to use insecticide spray.

- Suitable for fogging and misting covers up to 15,000m².

A new addition to the Phobi range! Phobi Flash Dose is a concentrate based on natural pyrethrum synergised with PBO. Highly effective on flying and crawling insects used in a number of indoor situations including the food industry. Phobi Flash can be applied either as a coarse spray or through a fogger.

HSE: 8454 NI:8454

Product	Code	Description
Phobi Flash Dose	IF4217	500ml Dosing Bottle

LARVENOL

Insect Control

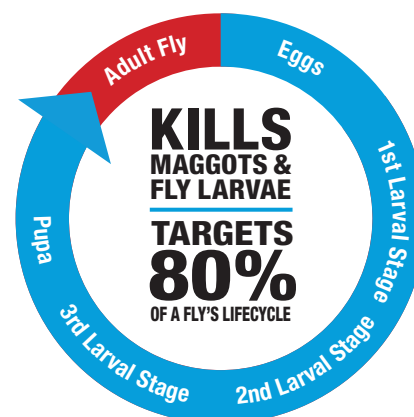

Larvenol Larvicide

0.4% S-Methoprene

Larvenol is a brand-new insect growth regulator for use in poultry and livestock housing containing S-Methoprene. Larvenol is applied as a granule directly onto the muck or areas where flies and maggots are breeding (i.e. mortality bins). Larvenol will ensure that the larvae cannot develop into adult flies and will control an infestation before it starts. Can be used in calf / animal rearing pens under straw bedding.

HSE: 9980

Product	Code	Description
Larvenol 1kg	I5253	1kg Bucket
Larvenol 20kg	I5251	20kg Sack

ORGAN-X PRO & ORGAN-X

100% Natural Insecticides

Organ-x Red Mite Killer

Organ-X Red Mite Killer is ideal for use in poultry buildings, killing red mite on contact. Pyrethrum is extracted from natural chrysanthemum flowers and formulated into a fast action, knockdown and contact insecticide powder, rapidly killing red mite.

Organ-X Red Mite Killer

- **Rapid Knockdown**
- **Kills red mite on contact**
- **Natural extract contact powder**

Product	Code	Description
Organ-X Red Mite Killer	ORGAN-X-CP	300g
Organ-X Red Mite Killer	ORGAN_X_RED	800ml

Organ-X Fox & Animal Deterrent Spray & Powder

A soluble powder or surface spray that can be used to discourage domestic animals, foxes and birds by confusing the animal/birds sense of taste and smell. It is suitable for use on all crops, flower beds, buildings, and around poultry units.

- **Treats up to 50m²**
- **Repels foxes and other animals**
- **Humane control**

Product	Code	Description
Organ-X Fox Deterrent	D2400	2x50g
Organ-X Cat Deterrent	D2300	1L

Organ-X Pro Freeze Spray

Lightning elimination solution for crawling and flying insects! Neutralizes and instantly kills insects. Chemical free, odourless and non-staining, this freeze spray is effective on cockroaches, spiders, ants, fleas, bedbugs, silverfish and against flies, mosquitoes, wasps, hornets, wasp nests etc. The pests are not poisoned, but simply frosted. Due to the sudden cold, the cells of insects, larvae or eggs burst and the pest dies immediately.

Product	Code	Description
Organ-X Pro Freeze	I7518	500ml

Organ-X Spider Killer Freeze Blast

Neutralizes and instantly kills spiders. Organ-x Spider Killer Freeze Blast is chemical free, odourless and non-staining. The liquid sprays from the aerosol at -40°C, paralysing the spider before freezing it to death.

- **Used by professional pest controllers**
- **100% natural**
- **Fast and effective**

Product	Code	Description
Organ-X Pro Freeze	I7518	500ml

Organ-X Desi-Dust Diatomaceous Earth

Desi-Dust works as a natural hygiene powder, suitable for use on farm and poultry units. Application in poultry units: Apply into nest boxes, slats and all areas where the birds roost. Apply directly around problem areas for poultry housing hygiene and control. If applied to litter it can lower odour by mopping up ammonia. Apply the product liberally to problem areas paying particular attention to cracks and crevices.

Product	Code	Description
Desi-dust 450g	ORGAN-X-P	450g Container

INS3020	300ml Aerosol Can (Foam)
INS3021	300ml Aerosol Can (F&W)

NEW

Insecto Pro Formula Wasp Nest Powder

0.50% Azamethiphos

Wasp Nest Powder is a ready to use insecticide that targets wasps, hornets and their nests. It contains the professional quality active ingredient, Azamethiphos. Azamethiphos minimises agitation and allows working wasps to return to the nest and take the powder further into the nest. This kills the queen and the rest of the workers.

HSE: 10122

Code	Description
IN-AZA-60013	300ml Aerosol Can

Insecto Pro Formula Insect Fogger+

0.11% Imiprothrin, 0.33% Cyphenothrin and 0.01% Natural Pyrethrum

A simple device that is deadly to insects. The Insecto Pro Formula Insect Fogger+ is an automatic release aerosol that once set off will clear a room of any problem pests from fleas, flies, spiders and moths to bedbugs and mosquitoes. Also for use in empty greenhouses.

HSE: 10729

Code	Description
INS3019	125ml Fogger

Insecto Pro Formula Killing Powder

0.50% Azamethiphos

Pro Formula Insect Killing Powder uses a professional quality active ingredient of Azamethiphos which is used by today's pest controllers that targets those unwanted insects within your home environment and outdoors.

HSE: 10122

Code	Description
INS3018	300g

Insecto Smoke Bombs

13.35% Permethrin

Insecto smoke bombs come in a range of 3 different sizes containing the active ingredient permethrin. Simply light the non-sparking wick, smoke fumes will work their way into all nooks and crannies killing all flying and crawling insects in the treated area. Can be used all year round.

HSE: 9902

Code	Description
INS3010	24 x Mini
INS3011	12 x Midi
INS3012	12 x Maxi

NEW

Insecto Pro Formula Ant & Nest Killing Powder

Insecto Pro Formula Powder is a ready to use, dustable powder insecticide. The active ingredient, Deltamethrin, can kill insects quickly on contact. It can be used inside or outside. Apply to cracks, crevices and any other places where insects might hide.

Auth. n°: UK-2017-1104-0003

Code	Description
INS3027	300g

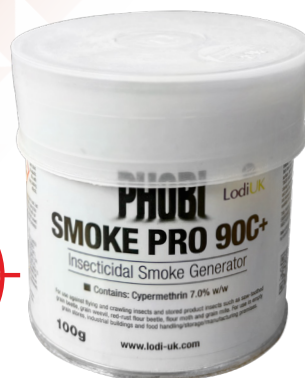

Insecto Fly Sticky Paper

Non-toxic trap for capturing flies. Very easy to use - just pull the loop downwards slowly in a twisting motion. Fix to wall or ceiling near to flies, allowing the paper to hang down. Flies are lured to the attractants. It is very important to trap unwanted flies as they are vectors for many pathogens, spread viruses, worms and can transmit disease.

Code	Description
INS3015	Pack of 4

STORED GRAIN PROTECTION

Phobi Smoke Pro 90C+

NEW

7% Cypermethrin

Control of stored grain pests.

The new Phobi Smoke Pro 90C is a highly effective acaricide / insecticide for use in empty grain stores. Phobi smoke has proven 100% efficacy in the control of Grain Beetles / Grain weevils and Grain mites. Simply light the wick of the smoke and place in the empty grain store and the smoke will reach into all the nooks and crannies where the insects hide.

- 100% Efficacy
- Active ingredient – Cypermethrin
- 100g smoke

HSE: 10615

K-OBIOL

Stored Grain Protection

- **New Ultra Low Volume (ULV) Pyrethroid Formulation** containing Deltamethrin and Piperonyl Butoxide
- **Ready to use**
- **No withholding period after treatment**
- **Up to 12 months control on grain and residues are removed in processing (Beer and Bread)**

K-Obiol ULV6

Unique to the UK and exclusively available from Lodi UK!
An innovative formulation which is applied directly to the grain giving it continual protection for up to 12 months.

Pyrethroid Formulation

K-Obiol® ULV6 is a modern pyrethroid formulation containing Deltamethrin, synergised with piperonyl butoxide for the control of all stored product insects known to infest grain and pulses. This Pyrethroid formulation is an ideal alternative to organo-phosphorus formulations.

Ready to Use

K-Obiol® ULV6 is ready to use liquid grain protectant for the control of stored product pests including crawling insects such as grain weevils, flour beetles, grain borers, saw-toothed grain beetles and bean weevils and flying insects such as rice moths, Indian meal moths and grain moths for up to 12 months.

The pack connects directly to application machinery so there is no measuring or pouring required. The system reduces the risk of application errors, has no concentrate to expose operators to & allows load rates to be maintained.

K-Obiol contains

Deltamethrin 6gms/litre. Piperonyl butoxide 54gms/litre. K-Obiol is accepted for use by the Brewing Research International (BRI) and the National Association of British and Irish Millers (NABIM).

Application Rate

4.2L of K-Obiol® ULV6 for 100 tonnes of grain for 12 months protection.

The Application rate of 42ml per tonne (or 42mg/kg) means the MRL is not breached and is 8 times less than accepted limits.

The manufacturing process of brewing and baking removes the residues of Deltamethrin therefore Deltamethrin is not detected in the finished product.

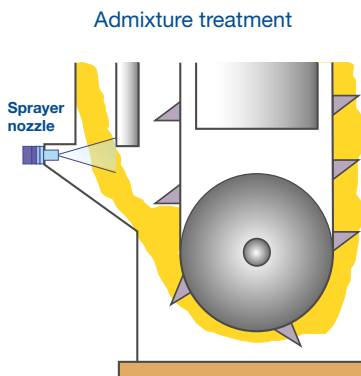

Specialist Ultra Low Volume (ULV) application equipment is required.

Application Equipment

Lodi UK have worked together with Grundfos for over 30 years in providing high quality and accurate pump systems to ensure that K-Obiol is correctly applied to your grain. We offer a smart digital pump along with tubing, nozzle and brackets to attach the to your current grain auger, elevator or dryer system. A simple tried and tested portable system designed for its ease of use and spraying accuracy before it goes into your stores

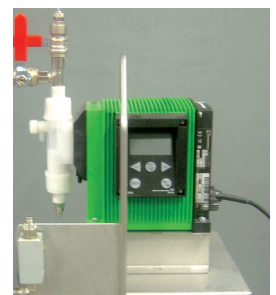

K-Obiol ULV6 Spray Application Equipment

Whatever your spray application requirements we can provide a solution to meet your specific needs.

Portable Digital Pump

K-Obiol Pump 2

Simple portable unit comprising of a pump mounted on a stainless-steel frame which fits directly onto the K-Obiol ULV6 15 litre container. The pack also contains nozzle, bracket & hoses. Simple portable unit.

Lodi's *Gems* **Harmonix®** **Rodent Paste**

Lodi's Gems Harmonix® Rodent Paste is an exceptionally powerful rodenticide that controls rodents in half the bait of other products. It must be used as per the technical instructions on the pack and there are many videos you can watch to learn how to use it effectively and safely.

PROVEN RODENT CONTROL WITHIN 7 DAYS WITH 50% LESS BAIT

The efficiency of Lodi's Gems Harmonix® Rodent Paste provides a cost-effective way to control rodents. With half the bait you can control the same amount of rodents in twice the speed making it highly efficient. After the dose, rodents stop feeding and this has 3 major benefits to the user:

- 1.Environmental impact - bait usage is reduced by 50%, thereby lessening the amount of rodenticides in the environment
- 2.Property damage – rapidly decreasing rodent activity will rapidly decrease the amount of damage committed by rodents
- 3.Risk of disease – a decline in rodent appetite and the eradication of rodents decrease the risk of disease

As a new edition to Lodi's Gems range, Harmonix® Rodent Paste is a highly effective ready-to-use non-anticoagulant rodenticide for the control of rodents. It provides farmers with an innovative and flexible solution to rodent problems which untreated can lead to disease, property damage, fire risk, and costly repairs.

Product	Code	Description
Lodi's Gems Harmonix Rodent Paste	HARMXP5KG	5kg Sack

Authorisation number:
GB-2020-1266; NI-2020-1266 IE/BPA 70695

Suitable for
**outdoors,
open areas
& burrows**

LODI'S GEMS HARMONIX® RODENT PASTE CONTAINS 0.077% CHOLECALCIFEROL

Key innovations with Lodi's Gems Harmonix® Rodent Paste are:

- Open areas and burrows included on the list of locations where bait can be placed
- Proven to be twice as effective as anticoagulants working in as little as 7 days
- Stop feed effect occurs after 2-3 days using half the bait of an anticoagulant and reducing the risk of damage and disease on farm
- No resistance
- Reduced risk to non-target species when considering non-bioaccumulate and non-persistent properties of the product in rodents or the environment

Description

3kg Bucket

Black Pearl Paste and Grain are highly attractive baits containing micro-encapsulated Alphachloralose. Formulated to control mice infestations within 24-48 hours.

The Alphachloralose active belongs to the narcotic family. Only a small amount needs to be consumed by a mouse and the active will start to take effect by reducing the body temperature of the mouse until it falls into a coma and dies.

In a lot of cases this can take as little as a few minutes. There is very little danger of any secondary toxicity issues with Alphachloralose as residues in dead mice are negligible and will not affect any predators that might prey on a mice controlled by Black Pearl.

Black Pearl Paste

4.00% w/w Alphachloralose

A unique and highly attractive bait formulated from a blend of premium grade cereals, mulched and mixed together to give superior performance.

Authorisation code GB-2014-0870; NI-2014-0870 IE/BPA: 70057

Anti Rodent Spray	R8061	500ml Can

RODENT CONTROL

New display packs specially formulated and produced for the rural user

Recent changes in legislation concerning rodent control have negatively impacted the rural user, these include smallholders/villages and houses with gardens bordering farmland. In response to these changes, Lodi UK are launching display packs with pouches of bait to support the rural user. A description has been included on the side of the pack which advises the user about the number of bait points they may require to protect their homes from infestations, allowing them to decide how many pouches they may require to control their infestation. **Certification or training is not required for the user to purchase the products below.**

Ruby Block & Grain

0.005% Difenacoum

RUBY BLOCK 25

RUBY BLOCK 25 contains the multi-feed active Difenacoum that gives users the confidence to treat a rodent infestation in more sensitive areas / homes where pets, animals and children may also frequent. The active ingredient is lower in toxicity to other actives and rodents will need to feed multiple times to hit a lethal dose. Authorisation code GB-2016-1053-0005; NI-2016-1053-0005

RODENT CONTROL

New Solar, Electronic Repellers & Chemical-free Rodent Control

Our high-quality rodent bait stations are designed to perfectly complement our range of leading rodenticides. Lodi UK's proven experience and expertise in professional pest control has allowed us to gain an insight on what works! As the UK's leading products with pest controllers and farmers alike, Lodi UK also offer chemical-free rodent control to be used alongside our rodenticide range.

Racan Instant Electronic Mouse Killer

The Racan Electronic Mouse Killer is a highly powerful, discreet reusable mouse trap. One set of batteries kills 100 mice quickly and humanly. It is fitted with a safety cut off so it is ideal for homes where children and pet are present.

- Easy Set
- No Poison needed
- Re-useable

Code RAC1111
Outer 6 per case

Racan Instant Electronic Rat Killer

The Racan Electric Rat Killer is a humane fast way to catch and kill nuisance rats indoors. This economical unit requires no batteries and is easily charged using the supplied USB cables or USB mains connection if preferred. The safety protection switch prevents shocks to people.

- Kills rats instantly
- Traps & zaps
- Up to 20 rats per full charge
- Re-useable

Code RAC1104
Outer 6 per case

Racan Multi-catch Metal Mouse Trap

The Racan Multi-Catch Metal Mouse Trap will humanely catch and hold up to 10 live mice. The trap has two self-setting one way entry points for effective trapping and a clear window to see how many mice have been captured.

- Humane live catch
- Holds up to 10 live mice
- Extra ventilation points to reduce stress

Code RAC1110
Outer 6 per case

Racan Solar Sonic Mole Repeller (Twin-pack)

The Racan Solar Mole Repeller Twinpack uses Quad Pulse Action Technology to ensure the mole is humanely driven out to new territory. They are self-charging using solar power - one full charge can last up to 25 days.

- Continuous & humane lawn protection
- Solar powered self-charging unit
- Humane child & pet friendly
- Covers up to 120 m2

Code RAC1105
Outer 6 per case

Racan Solar Sonic Animal Repeller

The Racan Solar Sonic Animal Repeller is designed with three bionic sounds (gun, eagle, dog) a flashing light & ultrasonic waves to scare cats, dogs and wild animals from gardens. The repeller unit makes animals feel uncomfortable so they leave the area but will not harm them.

- Solar powered self-charging unit
- Continuous 24-hour humane protection
- Detection 110 degree, sweep up to 10m

Code RAC1107
Outer 6 per case

Racan Triple Sonic Pest Repeller

The Racan Triple Sonic Pest Repeller adopts modern micro-electronic technology. It gives out 3 kinds of electronic waves simultaneously and alternatively. It humanely acts upon rodents and insects to make them feel uncomfortable, so they leave the home.

- 24 hour home protection
- Up to 100m2 coverage
- 3x powerful soundwaves
- Humane child & pet friendly

Code RAC1106
Outer 12 per case

FLY CONTROL ON FARMS & INSIDE ANIMAL HOUSING

3 Step Guide to Fly Control

1) MONITORING

Tools and Fly Identification

Organ-X Fly Trap XL

New stronger, sealable bag. The Fly Trap XL is a non-toxic solution to fly problems. Using fast-catch technology, each trap can catch up to 40,000 flies. Just add water and hang in farm buildings, animal housing, homes, gardens and waste & industrial sites. Use for monitoring fly activity.

- Just add water
- Non toxic
- Catch up to 40,000 flies

Product	Code
Organ-X Fly Trap XL	FLYBAG

2) LARVICIDE

Control early stages of fly life cycle

Larvenol Larvicide

0.4% S-Methoprene

Larvenol is a brand-new insect growth regulator for use in poultry and livestock housing containing S-Methoprene. Larvenol is applied as a granule directly onto the muck or areas where flies and maggots are breeding (i.e. mortality bins). Larvenol will ensure that the larvae cannot develop into adult flies and will control an infestation before it starts. Can be used in calf / animal rearing pens under straw bedding.

HSE: 9980

Product	Code	Description
Larvenol 1kg	I5253	1kg Bucket
Larvenol 20kg	I5251	20kg Sack

3) ADULTICIDE

Control adult stages of fly life cycle

Twenty One

WETTABLE POWDER CONCENTRATE - 10% Azamethiphos

Twenty One is a uniquely formulated product for professional use against flies in livestock housing by application to walls and ceilings of cowsheds, stables, piggeries, poultry sheds, waste management sites and other environments.

- Azamethiphos is the fastest chemical on the market
- The only product available that can be both sprayed and painted

HSE: 8851

Product	Code	Description
Twenty One 1kg	IFLY	1kg pack containing 4 x 250g sachets

Digrair Fly Reel, Refill & Glue Roll

FLY REEL - Easy install, non-toxic, environmentally friendly and proven.

FLY GLUE ROLL - Unique design with fly sex pheromones and specially formulated glue for non-toxic control of flies on the farm.

HSE: 9352

Code	Description
IFGR10	10m Fly Glue Roll
IFRK	Digrair Fly Reel Kit
IFRR	Digrair Fly Reel Refill

Maggots

GRANULAR LARVICIDE - 2% Cyromazine

Maggots is a highly efficient larvicide that attacks the maggot and stops it developing into a fly. Formulated with the growth regulator cyromazine it is very easy to use and can either be sprinkled on slurry or sprayed after dilution in water. Maggots is the only effective way of stopping fly problems and the results can be seen on the adult fly population in approximately 2 weeks after first application.

HSE: 9553

Product	Code	Description
Maggots 10kg	MG10	10kg Larvicide Bucket
Maggots 20kg	MG20	20kg Larvicide Sack

Dairy Fly Spray

2.175% Pyrethrins

Concentrate makes the equivalent of 10 x 5 litre drums of ready to use fly spray.

- Suitable for fogging and misting covers up to 15,000m².

Insecticide for professional use against flying and crawling insects. For use in and around Farm Buildings, Dairies, Milking Parlours, Animal Rearing Facilities and Animal Housing.

A highly concentrated pyrethrum formulation that will target and control insects fast. Pyrethrum is unique in that after it has controlled the infestation it will disappear, making it ideal for sensitive areas.

HSE: 8454

Product	Code	Description
Dairy Fly Spray	I4218	500ml Liquid Concentrate

AMENITY PRODUCTS

Complete Fly Control

Lodi UK are proud to introduce the complete fly, wasp, rodent and bird control package for use on waste management and recycling sites.

With the launch of Maggots granular larvicide, Lodi UK ensures that you can gain full and effective control of fly larvae on site. The larvicide compliments Lodi UK's highly successful and proven range of Azamethiphos based adulticides.

The Lodi UK fly control products are the UK's fastest working insecticides and our range ensures that we can control any fly infestation fast and effectively. In addition, Lodi UK has full technical support and back up, including an entomology service, technical and product advice, including site visits and application solutions.

Avoid a conviction for an environmental offence which may lead to adverse local and, in some cases, national publicity.

For example, the EA publicises environmental convictions on its website as part of its "name and shame" policy. Also, local press may sit in on criminal court proceedings. Consequently, there may be damage to the business' reputation, even if it is found not guilty. A conviction could increase the business' insurance premiums and the business' ongoing relationship with the regulator may be undermined.

A poor environmental compliance record can cause difficulties during the sale of a business, especially if the buyer requests environmental warranties and/or indemnities.

The European rodenticide regulations which came into effect on 1 March 2018 are designed to ensure that such products are used correctly, in ways which minimise their exposure to wildlife and other non-target species. They limit the sale and use of professional-strength rodenticides to named individuals who hold a certificate which is approved by the Campaign for Responsible Rodenticide Use (CRRU). Evidence will be required at the point of purchase. Lodi UK provides an e-learning course in conjunction with Lantra comprising of learning modules and a proctored multiple choice exam which upon successful completion, provides a nationally recognised and CRRU approved qualification reflecting national standards for the rodent management sector. This will enable you to purchase professional rodenticide pack sizes of 3KG and above. Please select the course link below:

Lodi Total Product Package

Providing Treatment from Egg to Fly

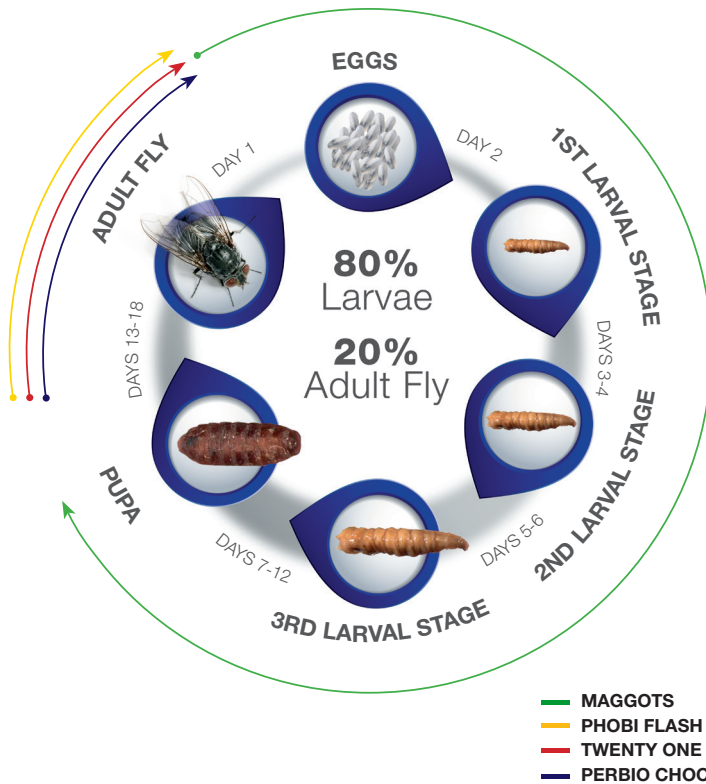

Technical Information

See our diagram depicting the life cycle of a fly at 25°C in temperature, however as the temperature increases the fly's life cycle speeds up. It is possible for a fly to complete its life cycle from egg to fly in 8 days at optimum conditions. The diagram details each of the Lodi fly control products and demonstrates the stages in which the products should be used at the relevant life cycle stages. Once the range of products is applied correctly complete fly control will be achieved.

Flies cannot feed on solid matter and need to regurgitate their last meal with an enzyme to liquefy their food. It is this process that carries and spreads disease. Flies carry and transmit in excess of over one hundred diseases in which approximately 70 are zoonotic (a disease that normally exists in animals but that can infect humans).

Cost to Site Owners

Most breaches of environmental law are criminal offences. The penalties are usually a fine and/or imprisonment. For cases tried in the Magistrates' Court, the maximum penalty is usually a fine of up to £50,000 and/or six months' imprisonment. For cases tried in the Crown Court, the maximum penalty is usually an unlimited fine and/or two years imprisonment. The regulators can also prosecute the business' directors, managers, secretary or other similar officers if it can be shown the offence was committed with their consent or connivance, or was attributable to their neglect.

Lodi Total Service Package

Providing On-Site Assistance

Waste Site Fly Service

To complete the fly control package Lodi UK are proud to announce our new technical and on site support service. This will be available seven days a week meaning that Lodi UK are the only company that offers the full fly control package. We will assist customers and solve all fly control issues. Lodi UK are able to offer the best on site fly service and can visit and solve issues on site directly. Fully armed with specialist equipment, expertise and pioneering application methods, ensures that this service provides the best possible control methods available*.

Technical Advice & Support

Lodi UK has a technical telephone service dedicated to applying Lodi products. Advice can include anything from application methods to preventative controls and monitoring systems.

Entomology Service

Lodi UK have an in house entomologist who can quickly assist in identification of fly species in order to assist you on fly control methods and knowing your pest.

* The on-site fly control service will be assessed individually and provided at a cost

AMENITY PRODUCTS

The following Lodi UK products are registered for use in and around waste management and recycling sites to control flies, wasps, rodents and birds.

Product	Image	Description	Application Rates & Tips	Page
Maggots		Maggots is a highly efficient larvicide that attacks the maggot and stops it developing into a fly.	Use Maggots insect growth regulator as part of an integrated approach. Spray directly on to waste to eradicate fly larvae and stop the development of nuisance flies. It is recommended to use with adulticide fly products, including baits and those with a different mode of killing or trapping action. Application rate: 100g of product per tonne of waste	6
Twenty One		Twenty One is a uniquely formulated wettable powder for the control of both biting and non-biting flies in waste management facilities and waste bins. Quick, effective and long-lasting capability of up to 12 weeks, Twenty One is the only product that kills by both contact and ingestion. To control non-biting flies such as common and lesser housefly, mix with water or flat coke. It is best to paint in stripes onto walls, surfaces or boards which can be hung up. These particular flies are attracted by the sexual pheromones and like to feed on the attractants, killing them by ingestion as well as by contact.	Tips: <i>It is proven that the best way to mix Twenty One is with flat coke. Yes I said flat coke! The acidity and extra sugar enhance the azamethiphos active ingredient. If applying as a paint onto boards apply in broad stripes. Flies will land on the untreated area and then walk and feed on the treated area.</i> Application rate: Apply as spots to surfaces where flies congregate. Paint: Mix 500 g of product with 500 ml of lukewarm water covering approximately 5-10 square metres in total area. Spray: Mix 125 g of product with 5 L of lukewarm water then apply diluted product by spray to 100 square metres of surface. In case of very high infestation, mix 250 g of product with 2 L of water.	7
Twenty One Fly Boards		For use when applying Twenty One in stripes to boards ready for hanging in waste facilities.	Ideal for applying Twenty One fly bait and hanging around your waste facility to attract and kill flies. Great for visual indication of fly activity and monitoring.	8
Perbio Choc		Perbio Choc is the strongest ready to use fly spray in the UK and 4-5 times stronger than any other comparable insecticide. Contains both 0.64% Permethrin and 0.63% Tetramethrin, nothing can compare to its ultimate power when killing all types of insects from flies to wasps. Perbio Choc is a residual insecticide so best used where surfaces are not cleaned down as often to allow for more flies to and insects land on treated areas and achieve amazing results. It can be both sprayed and fogged. Its coverage goes a long way, 625m ² surface treatment and 12,500m ³ aerial fogging treatment.	The secret with Perbio Choc is to apply it very finely, almost misting on to surfaces with no run off. If you see run off, you are applying too much product and we would advise changing to a finer nozzle. Due to the strength and carrying solvent of Perbio Choc you do not need to apply the same amount of product as weaker everyday fly sprays. If applied correctly Perbio Choc works out more than half the price of weaker formulations which won't give the same coverage. If a fly infestation or wasp invasion has got out of control Perbio Choc will quickly eliminate all in one treatment. Long lasting, up to 3 months. Application rate: Surface spray: Apply 50ml of product per 6.25 square metres Fog/ULV: Apply 0.4ml of product per cubic metre of treatable volume	7
Phobi Flash		Phobi Flash is a concentrate based on natural pyrethrum synergised with PBO. Highly effective knockdown of flying and crawling insects. This fantastic product is ideal for areas where fast knock down is required, leaving no insecticide residue after treatment. Ideal for areas that are cleaned regularly or sensitive to insecticide use. There is no tainting or smell and it can be sprayed or fogged. Any fly or wasp hit with this product will die very quickly.	Application rate: Spray: For flying insects dilute 5-10ml of product with 500ml of water. Apply 50ml of diluted product per square metre. For crawling insects dilute 10-20ml of product within 500ml of water. Apply 50ml of diluted product per square metre. ULV Spray: For flying insects apply 100ml of undiluted product per 3000 cubic metres. Mist: For flying insects dilute 100ml of product within 900ml of water. Apply 100ml of diluted product per 3000 cubic metres.	10
Phobi CAPS		Phobi CAPS is a micro-encapsulated insecticide containing different sized capsules within the active for regular and continuous release. Prallethrin, 0.46%, gives the product a shock effect while the encapsulation of the Cypermethrin, 9.2%, active ensures stability to light, temperature and humidity. Non-staining, odourless, and effective on both porous and non-porous surfaces, Phobi CAPS is suitable for use in and around waste management and recycling sites designed to target crawling & flying insects such as spiders, wasps, flies and mosquitoes.	INSTRUCTIONS FOR USE: Shake the bottle before use. Dilute 50ml of product in 5L of water per 100m ² . SURFACE TREATMENT: Remove the filters in the front of the nozzle to protect the capsules and use a sprayer with a maximum pressure of 3 bar. Spray 1L of diluted solution over 20m ² . After treatment, the water evaporates leaving the micro-capsules on the surface. Indoors, ventilate throughout the treatment and ventilate before re-occupying the premises (on average 30 minutes to 2 hours depending on the level of ventilation). ACTION: Fast knockdown and long-lasting residual. After treatment, the treated surface is covered with thousands of micro-capsules. PHOBI CAPS works in less than 15 minutes and protects treated surfaces up to 12 weeks. Only treat again if a new infestation occurs.	10
Digrain C40 WP		A highly effective wettable powder containing a broad-spectrum synthetic pyrethroid residual insecticide for professional use in and around industrial establishments, including refuse tips and waste sites. The active, Cypermethrin, 40%, is formulated for the control of flying and crawling insects including houseflies, cluster-flies, mosquitoes, and wasps.	DIRECTIONS FOR USE: Add 1-2 litres of clean water to the sprayer, and then add the product according to the table below. Use the blue scoop provided with this pack for dispensing the product. A 'rounded' scoop of product measures approximately 10g. Add the remainder of the water. Shake the sprayer to mix contents 1 litre of ready-for-use spray treats 25 square metres of sprayable surface. APPLY AS A COARSE LOW PRESSURE SPRAY AS FOLLOWS: Crawling insects: Apply spray to harbours, resting places and vertical and horizontal surfaces where insects are seen. Pay special attention to cracks and crevices especially around animal sleeping areas. Houseflies, Cluster-flies and Mosquitoes: Apply spray to walls, ceilings and areas where pests rest. Do not treat exposed food or food preparation areas. Wasps: Spray the nest entrance and the surfaces upon which wasps alight.	7
Digrain Force EW		Digrain Force EW is a high strength EW concentrate combining actives to ensure fast and effective control with long term residual. A great all-round product packed with a high level of active ingredient for the successful control of flying and crawling insects such as flies and wasps. A highly effective, specifically formulated concentrate containing 14.5% Cypermethrin, a fast-acting neurotoxin in insects, 4.5% Tetramethrin, which also affects the insect's nervous system as a potent synthetic insecticide & 19.3% Piperonyl Butoxide which acts as an insecticide synergist, inhibiting the natural defence mechanisms of the insect to the actives.	DIRECTIONS FOR USE: Add a small quantity of water to a suitable compression sprayer and then add a product according to the table below. Add the remainder of the water, close the sprayer securely, shake to mix contents. One litre of RTU spray treats 20sqm of the surface. Target Pest: Crawling insects Routine treatment, 25mL of the product with 5 litres of water for maintenance and spot treatment. Heavy infestation, 50mL of the product with 5 litres of water for attack and clean-out treatment. Target Pest: Flying insects Routine treatment, 25mL of the product with 5 litres of water for the control of resting insects.	12
Digrain Cyperbio		A highly effective, broad spectrum, water-based insecticide with long term residual activity. An insecticidal surface spray for use in public health, food storage practice and waste sites. Ideal for both flying and crawling insects such as flies for long term residual activity of up to 12 weeks.	Application rate: For heavy infestations: Dilute 250ml of product with 9.75 litres of water then apply 1 litre of diluted product per 25 metres of surface spray or spray short bursts directly at insects. For routine treatment: Dilute 50ml of product with 7.95 litres of water then apply 1 litre of diluted product per 25 square metres of surface.	12

Product	Image	Description	Application Rates & Tips	Page
Quartz		A new formulation to the UK market that disables insects fast and controls infestations within hours. It's very easy to use and should be applied where insects reside, in and around buildings.	Fantastic on wasp nests due to its non-agitating formula to reduce the risk of stings. Low in toxicity. Apply 50g of product per wasp nest. Application rate: 10g (ants), 15g (bedbugs, fleas, cockroaches) per square metre, or 50g (wasps and hornets) per nest.	9
Digrain Fly Reel Kit & Refill		Easy install, non-toxic, environmentally friendly and proven.	An easy to install kit designed to effectively tackle resting flies. Particularly good for hanging in large areas just above the working areas. As the fly looks for somewhere to rest it is attracted to the thin sticky white tape where it is caught and trapped stopping it from potentially laying more eggs. The kit is useful to monitor fly activity.	9
Digrain Glue Roll		Unique design with fly sex pheromones and specially formulated glue for non-toxic control of flies on the farm.	The unique design combines a specially crafted surface impregnated with fly sex pheromones and covered with specially formulated attractive glue. It can be used as part of your fly monitoring process.	9
Digrain Control		The strongest fly control aerosol on the UK market containing two actives! 0.25% Permethrin 0.24% Tetramethrin. A giant 600ml can to ensure that flies can be controlled quickly around your buildings.	The strongest flying and crawling Insect killer aerosol on the market. Loved by everyone. Fast results. Application rate: Apply a 10 second burst per square metre of surface or apply short 1-2 second bursts directly at insects.	9
Digrain Wasp & Hornet		The UK's strongest wasp aerosol with a spray length of up to 18 feet!	Fires 18ft of 0.25% Permethrin 0.24% Tetramethrin strong killing spray with quick results. You walk right up to the nest spraying and destroying it. Application rate: Spray product for 15-18 seconds per nest from a distance of 2-3 metres or spray short 1-2 second bursts directly at insects.	9
Phobi F&F		The Phobi F&F One Shot fogging device is formulated with the proven combination of actives used in the Phobi range (Imiprothrin & Cyphenothrin). Faster and more effective than any other comparable product on the market.	Phobi F&F is a one-shot aerosol. Once activated, the aerosol will empty entirely. Application rate: Activate the aerosol with a quarter turn twist clockwise until it locks. Ensure you leave the area of application immediately and close any doors / windows etc behind you. For best control of pests leave the treated area for at least 2 hours before re-entering. Thoroughly ventilate the treated space before entering (between 2 hours to half a day, depending on the possible ventilation level).	10
Organ-X Flybag XL		New stronger, sealable bag. The Fly Trap XL is a non-toxic solution to fly problems. Using fast-catch technology, each trap can catch up to 40,000 flies. Just add water and hang in farm buildings, animal housing, homes, gardens and waste & industrial sites. <ul style="list-style-type: none">Just add waterNon toxicFast catch technologyCatch up to 40,000 flies	To install, simply add water, leave the top-secret attractant to ferment for two days and hang. Hang the fly bag inside and outside of the building for constant monitoring of fly activity. Keep the water topped to the line as it can evaporate in warm weather.	11
Digrain Bugster EC		<ul style="list-style-type: none">Suitable for spraying and ULV cold & thermal hot foggingFast knockdown8 to 12-week residualAll-purpose insecticide treatment Digrain Bugster is a brand new all-purpose professional-use insecticide by Lodi UK. Designed for use when both hot or cold fogging and as a surface spray, it's an effective control method against flies for waste sites.	Instructions for use -Surface treatment: Against crawling insects, the product should be applied where insects can be found, namely along skirting boards, pipes, the corners of walls, cupboards, below devices that generate heat. Against flying insects, the product should be applied where insects can be found, namely on windows, door frames, beams and walls. In the case of regular use, the product must first be diluted 200 times in water (for example, 20 ml/4 litres of water) before being applied in quantities of 4 litres of liquid per 80m ² . In the case of substantial infestations, double the dose (for example, 40 ml/4 litres of water) before applying in quantities of 4 litres of liquid per 80m ² . Leave the building 30min to 2h before reentry. -Fogging treatment: Only for inside use. Cold fogging: The product must be diluted 100 times in water (40 ml in 4L for 400m ³) Hot fogging: The product must be diluted 200 times in water (20ml in 4L for 400m ³) Leave the building sealed for 4-6 hours after treatment.	12
Gems Rodent Control		Every active and formulation you require to control the toughest of infestations!	From lower toxicity multi-feed baits to deadly single feed baits. Available to certificated holders providing proof of competence. Courses available online through Lodi UK.	18
Black Pearl		Black Pearl Paste and Grain are highly attractive baits containing micro-encapsulated Alphachloralose. Formulated to control mice infestations within 24-48 hours.	Unique mouse bait to Lodi UK. No secondary poisoning risk to non-target. UK's fastest killing mouse bait. Use as a single feed poison to reduce high infestations over 7 days.	21
Traps, cages and bait boxes		The extensive range of rodent traps / cages and mole traps to complement our range of professional strength rodent baits.	UK's favourite range of rodent boxes for the safe use of rodenticides. Lodi's range of traps are designed and manufactured for speed and efficacy of control coupled with durability and reliability.	23

LODI UK - PIONEERING, POWERFUL & ECONOMICAL PRODUCTS

- ✓ Buying concentrates helps reduce packaging waste
- ✓ Only mix what you need for the application
- ✓ Cost-effective & reduces on-farm chemical waste

Concentrate makes the equivalent of up to 40 drums of ready-to-use insecticide spray.

Concentrate makes the equivalent of up to 20 drums of ready-to-use insecticide spray.

PERBIO CHOC THE UK'S STRONGEST RTU

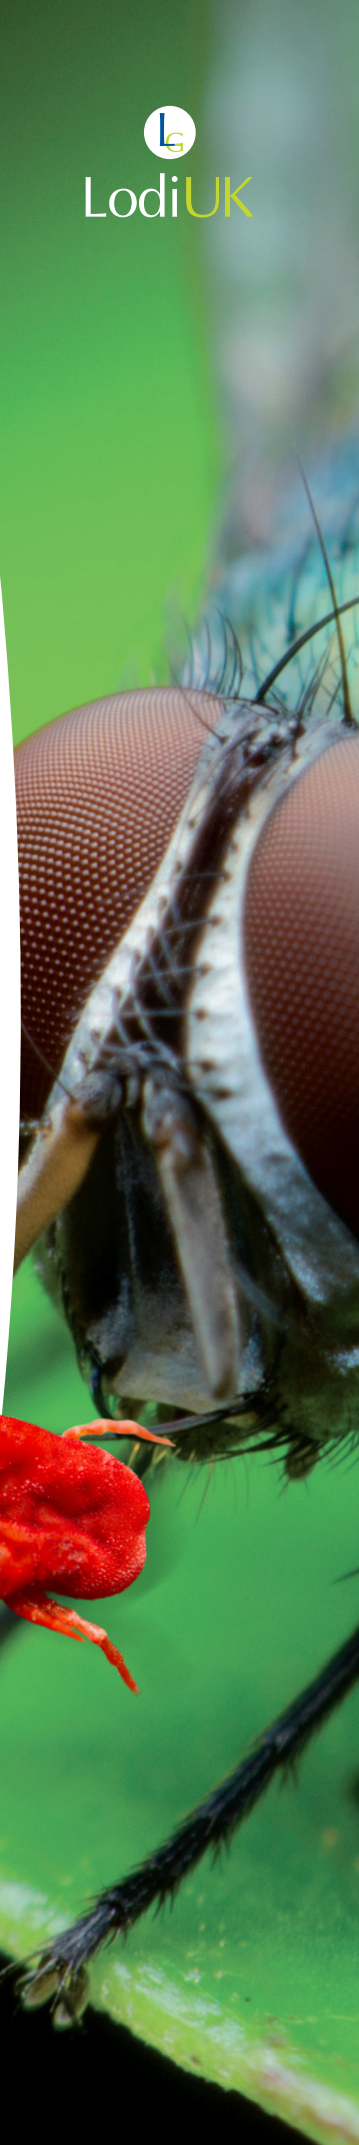

- ✓ 4x stronger than the competition
- ✓ Covers an amazing 625sqm of surface spray
- ✓ Can also be fogged covering 12,500m³
- ✓ Using Perbio Choc reduces on-farm packaging waste

1 litre of Perbio Choc RTU covers the same area as 5 litres of competitor product

See the complete fly and red mite control range on pages 4-10 & 25.
