

This pack covers approximately 120 square metres. Do not apply more than 20g product/sqm/year.

INSTRUCTIONS FOR USE

When to use: Application is usually during spring and early summer, and also in early autumn. Where attack is heavy, it may be necessary to repeat the application. Best results are achieved by application during mild damp weather, after rain or after watering the garden when slugs are most active. Applications are best made during the evening prior to when slugs commence feeding. For maximum effect (persistence on soil), bait should not be applied just before rain.

Where to use:

For use on bare ground and around all edible and non-edible crops grown outdoors, in the greenhouse or under other permanent or temporary cover. Sprinkle the bait thinly and evenly on the soil surface around and between plants to be protected or wherever slugs are to be found. After eating Garden Slug Killer bait the slugs cease feeding. Death follows.

How to use:

Sprinkle the pellets evenly on bare ground or around plants at approximately 5 grams per square metre. When applying this product near food crops care should be taken to avoid pellets becoming trapped or resting in the leaves.

SPOT ON

GARDEN SLUG KILLER

Pelleted bait containing 8.1 g/kg ferric phosphate (anhydrous)

Recycled bottle

Treats approx. 120 sq.m

Ideal for seedlings, plants, and edibles

USE PESTICIDES SAFELY / READ THE LABEL
