PROTECTIVE  
EQUIPMENT  
REQUIRED**

**SAFE  
TO  
USE**

**CHILDREN  
& PET  
SAFE**

It controls a wide range of pest species including whitefly, aphid, red spider mite, mealybug, scale and psyllid. Working by physical mode of action, this product contains a blend of surfactants which stop the pests from moving and being able to feed. This not only makes it safe to be used around children and pets, but also safe for bees and wildlife too. It helps to control, with regular use, powdery mildew by physically washing the foliage to remove active mildew spores.

**This unique formulation is now used by many professional horticultural growers across the UK. It is safe to use in any stage of plant growth, therefore ensuring healthy, green and clean plants, followed by optimised growth and bloom.**

## HOW TO USE INSECT CONTROL

1. Always do a test before full application to ensure the plant can withstand the application
2. Do not apply in full sun as this may risk scorching of the plant
3. Shake well before use, turn nozzle to the 'ON' position and apply thoroughly to upper and lower leaf surfaces
4. Re-apply every week to keep full control of the pests
5. When finished applying turn nozzle back to the 'OFF' position
