Desi-DUST Entrapment Powder

Ultimate Moisture Removal Powder for the natural prevention of Insect development

Desi-Dust is a natural organic (diatomaceous earth) entrapment powder; made up of tiny fossilised silica diatoms. Natural silica has many uses. Absorbing moisture, fats and oils; Aids in plant growth and development; Anti-caking feed additive are but a few.

Desi-Dust works by naturally drawing away all the essential moisture insects require to aid in their development and reproduction. Without any moisture the insects cannot breed, making living conditions uninhabitable!

Desi-Dust can be applied on and around pets and animals (avoid contact with eyes) including their bedding, litter areas, cracks and crevices. The natural silica absorbs any moisture, reduces odour and bacteria breeding grounds, resulting in clean dry areas where insects find it impossible to develop. Animal productivity is increased due to comfortable surroundings.

Desi-Dust can be applied to plants, their leaves and surrounding soil. Silica is naturally abundant in plants, aids growth and development, but also prevents ideal breeding conditions for crawling insects.

Desi-Dust can be liberally applied in and around the home, including in the garden when weather is dry.

DIRECTIONS FOR USE - For the Prevention of Crawling Insect Development

Bedroom/Home Indoor Use

Wash all bedding in hot water. Dust the powder into the mattress and ridges on the outside of the mattress. Apply directly to insects or near to insect activity.

Spread the powder all over the room, paying particular attention to cracks, crevices, carpets and corners. Scatter a large pile around each of the four bed legs. Apply to Cupboards, wardrobes, carefully behind electrical sockets, carpet and floor edging including skirting boards. Repeat this once a week for four weeks. It can be applied liberally around the home, office, greenhouses on and around plants, restaurant, kitchen, around cookers, fridges, cupboards, on hard and soft furnishings including carpets, bedding, sofas, chairs, curtains, cupboards, shelving, skirting boards, door frames, tiles, work units etc. Repeat treatment as necessary.

Outdoor Use

Apply dust directly to insects or as near to insect activity such as lawns, on and around plants, soil, patio, pavement, window frames, door frames, cracks and crevices. Put a ring of Desi-Dust around plants and directly to leaves. Re-apply after rain or damp weather.

Poultry & Animal Housing

Use in animal or poultry housing. Apply into nest boxes, slats, and all areas where the birds roost or animals live. Apply directly at or as near to insects as possible. If applied to litter it can lower odour by mopping up ammonia. Apply the powder liberally to problem areas paying particular attention to cracks and crevices. Be careful to avoid eyes when applying on or near to animals. Repeat treatment as necessary.

Pet & Animal

Thoroughly treat floors and bedding, in and around pet or animal sleeping areas. Be careful to avoid eyes when applying on or near to animals. Repeat treatment if necessary.

Animal Feed Additive/Anti-Caking Agent

Apply to animal feed only as a natural gut/intestinal tract cleanser and anti-caking product.

PRECAUTIONARY STATEMENTS

Caution: Can cause moderate eye irritation to humans and animals. Avoid contact with eyes. Wear eye protection when applying the product. Use adequate ventilation and avoid breathing dust.

STORAGE

Store in a cool dry area.
Keep out of reach of children.
The buyer assumes all responsibility for safety and use.
