Instructions for use: For best results fumigate in the late afternoon and leave the area being treated for a minimum period of 2 hours. Consider how many smoke generators are required for the area to be treated. Heavy infestations may require more than one application. Clear people and animals including fish from the area before use. Place canister(s) spaced out on the floor surface on a heat resistant surface. IMPORTANT: THIS PRODUCT MAY EMIT SOME SPARKS UPON IGNITION. CAUTION MUST BE TAKEN WHEN LIGHTING THE PRODUCT. Make the area to be fumigated as smoke tight as possible by closing all windows/vents etc. Open canister(s) and light the fuse on the canister furthest from your exit point first, then light the next fumer and move towards your exit point. Close the door on exit, it is not necessary to seal the door with tape. Leave for at least 2 hours but preferably overnight and then ventilate the area thoroughly.

THIS PRODUCT MUST NOT BE USED AGAINST HOUSEFLIES IN INTENSIVE OR CONTROLLED ENVIRONMENT ANIMAL HOUSES BECAUSE IT IS LIKELY TO CAUSE CONTROL FAILURE DUE TO INSECTICIDE RESISTANCE.

Rate of application: Apply at a rate of one smoke generator per: 600m³ for crawling insects and pests of stored products. For larger areas, use multiple smoke generators.
