MONITORING BLOCKS
WITH UV TRACKER

UV BLOCKS

BLOCK BAIT FOR RODENT MONITORING

Without active substance

Formulation with a fluorescent tracer allowing the detection of urine under a UV light

INSTRUCTIONS FOR USE:

The use of this type of non-poisonous bait is recommended in the following situations:

- when you suspect, without being sure, the presence of rodents
- after a pest control campaign, to ensure that there is no more infestation
- in areas where the use of poison is not possible, look for pathways of rodents in buildings to place the bait

Dispose 1-3 blocks 30g on the passage of suspected rodents, every 3 to 5m.

No consumption: continue to check regularly and renew the placebo when it dries.

Consumption: remove the placebo then treat thanks to a rodenticide product.

AN ADVANTAGE OF USING PLACEBO BAIT

Regular use of placebo bait avoids the use of large quantities of poisonous bait and helps identify the target pest.

Pre-baiting with placebo baits reduces mistrust rodents and strengthens dramatically the implementation of poisoned baits.

PRECAUTIONS

UV BLOCKS does not contain any active substance.

Block monitoring is not a foodstuff.

Keep away from the reach of children and animals.

Batch No:

Pack size: 4KG
